1. Introduction

With this module you can easily manage products features using CSV Import / Export. You can also enhance features values with pictures on product sheet.

1.1 Functionality

- Import / Export products features
- Option to delete products features before import
- Option to update product's name on import
- Multilingual compliant
- Possibility to add feature value pictures
- Option to update feature position on import
- Compatible with the module "SeoSA Extended Features in product"

1.2 SAV

[Contact technical support.](#)

2. Installation

The installation of the module proceeds as follows :

1. Go to the "Modules and Services" tab of your back-office and click on "Upload a module"
2. Drop the module archive in the window or select file on your computer
3. The module is installed automatically
4. Configure the module as you want

3. Configuration

3.1 View of the configuration interface

The screenshot displays two configuration panels. The top panel, titled 'EXPORT OF PRODUCTS FEATURES', includes a dropdown for 'Language of the file' (set to 'English GB (English)'), a text input for 'Field separator' (set to ';') with an example 'e.g. Wool; Green; Organic', and a text input for 'Multiple value separator' (set to '|') with an example 'e.g. Wool; Red | Blue | Green; Organic'. Below these is an 'Export' button with an upward arrow icon. The bottom panel, titled 'IMPORT OF PRODUCTS FEATURES', features a light blue warning banner with a question mark icon and the text 'The import file format must match the file exported before.' It contains the same language, separator, and multiple value separator settings. Additionally, it has two toggle options: 'Update product name on import' (with 'YES' and 'NO' buttons, 'NO' is selected) and 'Delete all products features before import' (with 'YES' and 'NO' buttons, 'YES' is selected). At the bottom, there is a 'File' input field with an 'Add file' button and a note: 'File extension: .csv (only UTF-8 encoding is allowed)'. An 'Import' button with a downward arrow icon is located at the very bottom of the panel.

3.2 Configuration Details

Regarding import and export you will be able to select the language of the file, the field separator and the multiple value separator that will be used to separate feature values. The imported file has to contain same columns as exported one. Indeed, the data update is based on products ID in the exported file.

If the option "Update product name on import" is enabled the product's name will be updated by the one in the imported file.

If the option "Delete all the characteristics produced before import" is enabled products features will be deleted before importing new products features. Otherwise the module will only add new features and features values.

3.3 Example of an exported file

4. Adding feature value pictures

With this module you can also add pictures to feature values. These pictures will be displayed on the products page.

You can add pictures directly from the Catalog > Attributes & Features tab of your PrestaShop administration.

Example of adding an image:

FEATURE VALUE

* Feature: label

* Value: Organic gb
